

A new iteration of an old collaboration!

Conservation Design Forum (CDF) is excited to announce we entered into a formal collaboration with [Biohabitats, Inc.](#), to better serve our clients throughout the western Great Lakes and upper Midwest. Our firms are aligned in both values and purpose. With a mission to 'Restore the Earth and Inspire Ecological Stewardship', Biohabitats currently works out of eight North American bioregions.

Founded in 1982, Biohabitats is a leader in conservation planning, ecological restoration and regenerative design. CDF and Biohabitats have partnered on many projects in the past, including the [Omega Center for Sustainable Living](#), a LEED Platinum facility that was among the first in the world to achieve the "[Living Building](#)" status.

Omega Center for Sustainable Living, Rhinebeck, NY.

This partnership will allow CDF to offer expanded multi-disciplinary expertise for our core work- conservation planning, ecological restoration, green buildings/sites, climate change adaptation, and neighborhood/district-scale sustainability. CDF will augment Biohabitats' capacity with broadened expertise in urban green infrastructure and Midwest ecologies.

"We are thrilled to formalize our long-time partnership with Biohabitats and offer broadened expertise with high-performance landscapes and the potential to improve access to nature and vitality of the places we work," explains David Yocca, CDF's Partner and Principal Landscape Architect / Planner.

Keith Bowers, Biohabitats' President and Founder, shares the enthusiasm. "It's rare to run across a firm that shares your values, complements your work, and makes the whole greater than the sum of its parts. CDF is just that firm."

We look forward to collectively providing an enhanced level of sound science, place-based planning and resilient design. To learn more please contact us at 630.559.2000, or at:
